About

Backend engineer experienced in building Python-based APIs, authentication workflows, and database-driven systems. Comfortable with SQL, background tasks, and secure backend practices. Highly motivated to learn, grow, and contribute to production-grade systems within a collaborative engineering team.

Education

BSc. (Computer Science), University of Nigeria, Nsukka 2020 – 2024
Second Class, Upper Division.

Professional Experience

Backend Engineer, Shama Technologies 06/2025 – 11/2025

- Contributed to the first version of the company's flagship product, working across backend architecture, API design and ensuring seamless flow for frontend integrations.
- Built secure user registration and authentication workflows, including OTP-based email verification, password reset functionality, and session/logout handling.
- Designed and implemented RESTful API endpoints following security best practices, ensuring data integrity and reliable frontend consumption.
- Developed and managed email workflows and templates for onboarding, verification, password recovery, and system notifications.
- Worked extensively with PostgreSQL for data modeling, querying, and optimization.

Backend Developer, SafeGroup 04/2025 – 06/2025

- Improved and deployed a client-facing educational platform that teaches Computer Science algorithms. Diagnosed and fixed critical authentication and login issues, optimized backend logic, and prepared the entire application for secure deployment on Namecheap hosting using environment variables and proper configuration practices.
- Developed the backend for the *Blockchain Career Expo* website. Built dedicated registration endpoints for participants, speakers, and panelists, and implemented automated custom email notifications. Enabled efficient event management by providing structured registration data accessible through an admin dashboard.

IT Lead, Greenvive Pharmacy 2020 – 05/2025

- Ensured day to day digital operations are working smoothly.
- Directed the technical department, optimizing digital and electronic processes that increased staff performance by a large margin due to reduced manual workload and improved audit compliance.
- Developed a custom computer program that streamlined tracking of company purchases and payments, enhancing checks and balances with vendors and suppliers.

Projects

Result Tracking System, <https://github.com/ndigitals04/result-tracking-system>

- Developed a comprehensive Result Tracking System using Python, Django, HTML, CSS, and MySQL to streamline academic result management and access for university students, parents, and examination officers.
- Implemented robust user authentication for students, parents, and exam officers, ensuring secure access to academic records.
- Designed and built functionalities for student and parent registration, including automated password delivery to parents via email.
- Created a module for exam officers to efficiently upload, update, and manage student results, with an integrated email notification system for parents upon result submission.
- Enabled students and parents to directly view academic results by filtering based on level and semester, significantly reducing manual inquiries and preventing result forgery.
- Applied Object-Oriented Analysis and Design Methodology (OOADM), including various UML diagrams, throughout the project lifecycle to ensure a structured and scalable solution.
- Implemented feature that sends emails to Parents anytime a new result is published.

Fairpolls Voting Application, <https://github.com/ndigitals04/fairpolls>

- Developed an online voting website (FairPolls) utilizing Python and HTML to facilitate secure and accessible digital polling.
- Designed and implemented core functionalities for an online voting platform, including poll creation, vote casting, and result display.
- Constructed the web application's structure and front-end interface, focusing on user interaction for the voting process.
- Managed the project repository on GitHub, demonstrating proficiency in version control and collaborative development.

Blog REST API, <https://github.com/ndigitals04/drfdapi>

- Developed a RESTful API using Python and the Django REST Framework (DRF), demonstrating proficiency in backend web service development.
- Designed and implemented API endpoints for efficient data management, enabling core CRUD (Create, Read, Update, Delete) operations for various resources.
- Configured and deployed the API to a live environment (Vercel), showcasing practical experience with production-ready deployments.

Skills

Python

Django

MySQL

SQLite

HTML

CSS

Git & GitHub

Teamwork and Collaboration

Microsoft Office Suite(Word, Excel, PowerPoint, Access)

Communication

Flask

PostgreSQL

Docker

Redis

Celery

AWS
